Whole spike with awns trimmed, white, green and yellow anther were collected and total RNA, and poly(A) RNA were prepared, a cDNA library was made, and the CDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

                                                  /note="Vector: Lambda Uni-ZAP XR, excised phagemid;
Site_1: EcoRI; Site_2: XhoI; Seeds were surface-sterilized
, germinated and grown aseptically in the dark at room
temperature on filter paper with water, nystatin and
cefotaxime in covered crystallization dishes. Roots were
harvested. The tissue, total RNA, and poly(A) RNA were
prepared, a cDNA library was made, and the cDNA clones
were in vivo excised to give pBluescript phagemids in the
TJ Close lab (Choi, Close, Fenton) at the University of
California, Riverside. Plasmid DNA preparations and DNA
sequencing were performed in the OD Anderson lab (all
other authors)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5105595818
                                                                                                      Simons). Tissues collected from seven-way controlled leaf, stem, root and seed; leaf from plant at fourth leaf stage; spike from pre-anthesis through 20 days after anthesis; flag leaf; leaf and stem tissue from tillers, and root. Total RNA and poly(A) RNA were prepared from each tissue and then pooled, a cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Akhunov. Chin, Panton, Kianian, Otto, Simons, Zhang) at the
University of California, Riverside. Plasmid preparations and DNA sequencing were performed Anderson lab (all other authors)."

two-week-old sorghum plants 48 hr after inoculation; vector: pBluescript II from Lambda Zap II; Site_1: XhOI; Site_2: EcoRI; Two-week-old sorghum plants (BTX 623 cultivar) were infected with pathogen (isolate FRM42I of Colletotrichum graminicola, which is a sorghum isolate). RNA was prepared from infected leaves harvested from 45 seedlings 48 hours after inoculation. Note: young seedlings (2 weeks old) exhibit juvenile resistant reaction, which is an incompatible interaction. As they grow older (4 weeks or older), plants resume susceptiblity to anthracnose disease. The library, was made from poly-A

GENERAL INFORMATION:
APPLICANT: Havukkala, Ilkka
TITLE OF INVENTION: Polynucleotides, materials incorporating
TITLE OF INVENTION: them, and methods for using them.
FILE REFERENCE: 1049A
CURRENT APPLICATION NUMBER: US/60/171,431
CURRENT APPLICATION NUMBER: US/60/171,431
CURRENT FILING DATE: 1999-12-21
NUMBER OF SEQ ID NOS: 25199
SOFTWARE: FASESEQ for Windows Version 3.0
SEQ ID NO 5521
LENGTH: 589
TYPE: DNA
ORGANISM: Pinus radiata
                                                                                                                                                                                                                                                                                         RESULT 14
